

What Is This?

Job Automation Studio is a free tool that generates a personalised Python automation script for job applications. You answer a few simple questions — no coding needed — and it creates a script tailored to your target job, locations, and preferences. Then your AI agent runs it.

The 3-Step Process

■ Step 1	About You	Fill in your name, CV, and target job role.
■ Step 2	Job Preferences	Choose locations, salary, and companies to skip.
■ Step 3	Sites & Tools	Select which job sites to search.
■ Results	Your Script	Download your automation script — ready to run!

■■ **Note:** You need an AI agent (like QClaw, OpenClaw, or Claude) to run the script. The tool generates it — your AI executes it. See README for details.

Step 1 — About You

Fill in your personal details so the script knows who you are

Job Automation Studio

Answer a few questions → Get your personalised job automation script.
No coding needed. Works best with AI agents (QClaw, OpenClaw, Claude).

 Step 1 — About You

 Step 2 — Job Preferences

 Step 3 — Job Sites & Tools

 Your Results

Tell us about yourself

All fields optional — the more you share, the better the script!

Full Name e.g. Muhamad Septian Pamungkas	Email your@email.com	Phone / WhatsApp +62 896 0247 5967
---	-------------------------	---------------------------------------

 Upload CV (PDF/TXT) — auto-fills skills

Drop File Here
- or -
Click to Upload

...or paste CV text here

Paste your CV text here to extract skills automatically...

 What kind of work are you looking for?

Choose a preset (or custom)

☒ Custom (tell us everything)

☐ Developer (MERN / Next.js)

☐ IT Support / Helpdesk

☐ DevOps / Cloud Engineer

☐ Data Analyst

☐ UI/UX Designer

☐ Fresh Graduate (any tech)

Job Title / Role

Dashboard — Step 1: About You

■ Upload your CV and the tool automatically detects your skills and experience level.

Full Name

Your full name as it appears on your CV

Email

Your active email for job applications

Phone / WhatsApp

Your contact number with country code

Upload CV (PDF/TXT)

Optional — upload to auto-detect skills

Paste CV Text

Or paste CV text directly to extract keywords

Job Title / Role

e.g. Fullstack Developer, IT Support, Data Analyst...

Preset Selector

Choose a preset that matches your background for smart defaults

■ **Tip:** You can skip most fields — the more you fill, the better the generated script will be.

Step 2 — Job Preferences

Tell the tool what you want and what you want to avoid

Job Automation Studio

Answer a few questions → Get your personalised job automation script.
No coding needed. Works best with AI agents (QClaw, OpenClaw, Claude).

 Step 1 — About You  **Step 2 — Job Preferences**  Step 3 — Job Sites & Tools  Your Results

Where do you want to work?

Select all that apply. The script will search all these locations.

Location Groups

- ☒  Indonesia — Karawang/Cikarang (on-site) ☐  Indonesia — Jakarta (hybrid/remote) ☐  Singapore (remote) ☐  Malaysia (remote) ☐  Thailand (remote)
- ☐  All locations above

Work Type

What work setup do you prefer?

- ☐ I only want remote jobs ☐ Remote is ideal, but hybrid is OK ☐ I'm fine with any location near me ☐ Any work type — just give me a job!

Seniority Level

What level roles do you want?

- ☒ Skip anything Senior, Lead, Manager, Director ☐ Junior and Mid-level are fine ☐ I'm happy with senior roles too

Companies to AVOID

Companies to skip (comma-separated)

bank, fintech, ovo, dana, gopay, linkaja, shopeepay

Dashboard — Step 2: Job Preferences

→ Location Groups

Select all locations where you'd accept a job. The script will search each one.

→ Work Type

Remote only / Hybrid / On-site — what fits your situation?

→ Seniority Level

Choose whether to include or exclude senior/lead/manager roles.

→ Companies to AVOID

Pre-filled with banking and fintech names. Add any company you don't want to work at.

→ Salary Expectations

Your minimum acceptable salary per month — in the local currency.

→ Daily Application Cap

How many jobs to apply to per day. 50 is a good balance to avoid rate limits.

■ **Tip:** LinkedIn allows ~50 Easy Apply per day before they start blocking you. Start with 30-50 and adjust.

Step 3 — Job Sites & Tools

Choose where to search and how to run the automation

 **Job Automation Studio**

Answer a few questions → Get your personalised job automation script.
No coding needed. Works best with AI agents (QClaw, OpenClaw, Claude).

Which job sites do you want to search?

The script will search ALL selected sites. More sites = more jobs.

Active Job Sites

☒ LinkedIn

☐ Indeed

☐ Glassdoor

☐ Jobstreet ID

☐ Glints

☐ Angellist

☐ WeWorkRemotely

☐ RemoteOK

- About each site:
- LinkedIn (linkedin.com) — Best for automation (Easy Apply). Watch for error_code:9101 anti-bot.
 - Indeed (indeed.com) — Direct apply. Less strict on bots.
 - Glassdoor (glassdoor.com) — Company reviews + jobs. Best used manually.
 - Jobstreet ID (jobstreet.co.id) — Popular in Indonesia. Good for local jobs.
 - Glints (glints.com) — Tech jobs in Indonesia. Also great for recruiter outreach.
 - Angellist (angel.co) — Startups. Remote-friendly. Salaries are shown.
 - WeWorkRemotely (weworkremotely.com) — 100% remote jobs. Very automation-friendly layout.
 - RemoteOK (remoteok.com) — Remote jobs aggregator. Simple layout.

Cover Letter Style

How should your cover letter sound?

☒ Clean and formal

☐ Warm and approachable

☐ Short and to the point

Do you have an AI agent?

This is important! AI agents handle the smart parts of automation.

Dashboard — Step 3: Job Sites & Tools

Site	Type	Best For
LinkedIn	■ Auto-Apply	Global, fastest automation
Indeed	■ Auto-Apply	Large variety of jobs
Glassdoor	■■ Manual	Company research + salary info
Jobstreet ID	■ Auto-Apply	Indonesian local jobs
Glints	■ Auto-Apply	Tech/startup roles in Indonesia
Angellist	■ Auto-Apply	Startups, remote-friendly
WeWorkRemotely	■■ Manual	100% remote roles
RemoteOK	■■ Manual	Remote tech jobs

■ With AI (Recommended)

QClaw / OpenClaw — AI handles anti-bot, form filling, errors automatically

■■ With Playwright

Free browser tool — reliable but no AI smarts

■ With Selenium

Classic option — more setup required

■ Manual (Safest)

Use search links — apply by hand, no automation

Step 4 — Your Results

Download your script and run it

Job Automation Studio

Answer a few questions → Get your personalised job automation script.
No coding needed. Works best with AI agents (QClaw, OpenClaw, Claude).

 Step 1 — About You

 Step 2 — Job Preferences

 Step 3 — Job Sites & Tools

 Your Results

✓ Your Generated Script & Materials

 Generate My Script

Fill in Steps 1-3, then click *Generate My Script*

Need help?

 Ask your AI agent: 'Run my job automation script'

Generated Python Script

 automation_script.py

</>

 Cover Letters (ready to copy-paste)

 Search URLs (open these in your browser)

Dashboard — Your Results tab

After clicking  **Generate My Script**, four things appear:

-  Profile Summary — A recap of what you entered — check it looks right.
-  Python Script — Your personalised automation script — download this .py file.
-   Cover Letters — Ready-to-use cover letters for each job site — copy and paste.
-  Search URLs — Direct links to each job site search — open these if running manually.

How to run the script:

Option A — Give it to your AI agent:

```
"Run my job automation script at /path/to/your-script.py"
```

Option B — Run directly in terminal:

```
$ python3 your-script.py
```

Common Errors & Fixes

Error	Cause	Fix
error_code:9101	LinkedIn anti-bot triggered	Wait 2-3 minutes. Run off-peak. Use VPN.
UI changed	LinkedIn updated their layout	Re-generate your script from the dashboard
No Easy Apply button	Job doesn't support it	Skip that job and try the next one
Captcha appeared	Too many requests	Pause 1 hour, reduce daily cap, or use VPN
Script stopped	Rate limit or error	Next scheduled run will pick up where it left off

■ Re-generate your script every 2 weeks. Job sites update their UIs often — an updated script = better results.
